

SITE PLAN RENDER

LOCATION:JOGOO ESTATE, THIKA-GATURA RD

Designed for a standard 50 by 100ft urban plot, this project focuses on providing all the functional spaces and luxuries of a typical expansive mansion while keeping the overall built footprint low i.e. restricted to 2 storys. The program is specifically tailored for multigenerational family living.

<u>Key Design Concepts & Layout Strategies:</u>

The house has dual master bedroom configuration, which includes two full master bedrooms, one on the ground floor and one on the upper floor,specifically planned to comfortably accommodate aging parents or visiting in-laws without forcing them to navigate stairs.

It also has inward facing privacy planning, where the house turns inward away from surrounding plot boundaries. The front yard is reserved strictly for utility operations and parking, the mid section is where the common spaces are located whereas the private backyard is oriented around a family swimming pool and outdoor leisure zone.

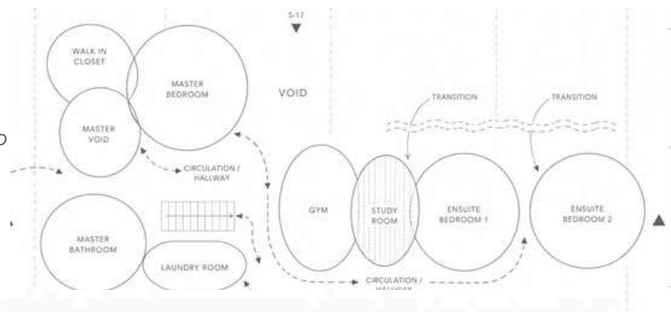

Additionally, all the bedrooms open towards this backyard space, providing a pristine focal point to each private space.

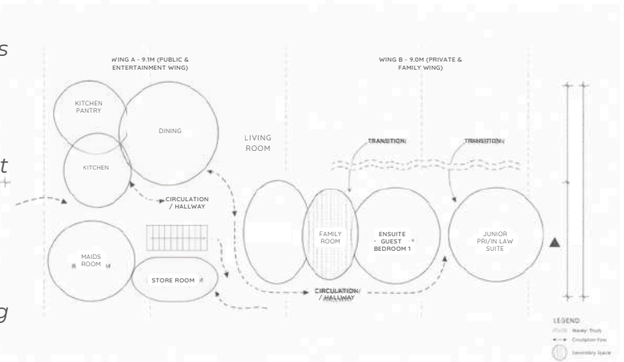

A concealed rooftop terrace is engineered to remain hidden from street level, preserving the low-rise residential profile and skyline of the surrounding neighborhood.

<u>Key Technical Learnings:</u>

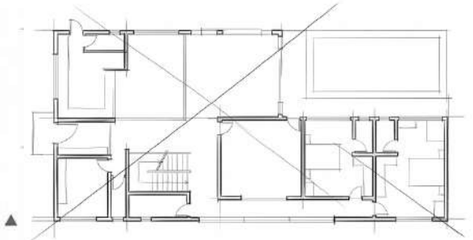

Mastered professional-grade interior design presentation standards, spatial efficiency on tightly constrained residential plots, and preparing comprehensive client presentation drawing sets.
